Indoor Air Quality Service

IAQ refers to the air quality within and around buildings and structures, especially as it relates, to the health and comfort of building occupants.

IAQ is defined as the quality of air in the workspace environment in a place like schools, organizations, Operation theaters, Laboratories, etc.

There are multiple factors causing contamination of air. The presence of dust, fungi, clean solvents, formaldehyde, paints, and perform, may seem counterintuitive, but these factors are a few out of many causes that impact the air we breathe. To take control of these causes are not entirely in our hands, but what it is in our hand is to keep this quality of air in check.

- ❖ Temperature
- ❖ Relative Humidity
- ❖ Oxygen
- ❖ Carbon Dioxide
- ❖ Carbon monoxide
- ❖ Sulphur dioxide
- ❖ Nitrogen dioxide
- ❖ Particular matter
- ❖ Formaldehyde
- ❖ Ozone
- ❖ Ammonia
- ❖ VOCs
- ❖ Total Bacterial Count
- ❖ Coliforms
